Bright Black Bring Technical Wizardry to Film Festival

The spirit of generosity and support for Australia's No #1 Sustainability Film Festival continues with the Gold Sponsorship of cutting edge audio visual and event staging company Bright Black AV.

Located in Cairns and servicing North Queensland, Bright Black AV was involved in the first Mission Beach Film Festival mounted last year. With the growth of the 2010 festival the support of Bright Black AV is essential to pull off the creation and operation of 3 screening venues.

'Not only does Bright Black AV have the necessary industry quality equipment and resources to put on a professional event, but the skills, expertise and their enthusiasm for our event is invaluable' said Festival Producer Dee Cameron who forged an excellent working relationship with the company last year.

The team at Bright Black AV have been staging events and producing spectacular Audio Visual displays across the region and the world for the past 20 years. Technology is updated regularly and the company is a leader in the region for data projection and vision, audio and lighting, event staging and technical event management and support.

Liam and Christine Elliston the leaders of the Bright Black AV team see the Mission Beach Film Festival as an ideal showcase of their resources. 'Our technicians are looking forward to returning to the Mission Beach Film Festival, particularly with the increased film program and the introduction of additional venues on-site. It is a great festival with an important message and we hope to be part of the event's growth into the future'.
